Introduction

This document explains the operating procedures, description of each screen, etc. for the use of ONEsLOGI Cloud WMS.

The following is used, for your convenience, to explain steps in operating procedures:

[NAME] Square brackets represent button names

<NAME> Angle brackets represent screen names

For explanations of all standard WMS functions and operations, please refer to the **Operation Manual (PC)** and **Operation Manual (Common)**.

Help

Help Outline

This section explains how to troubleshoot common problems that may arise while using ONEsLOGI Cloud WMS.

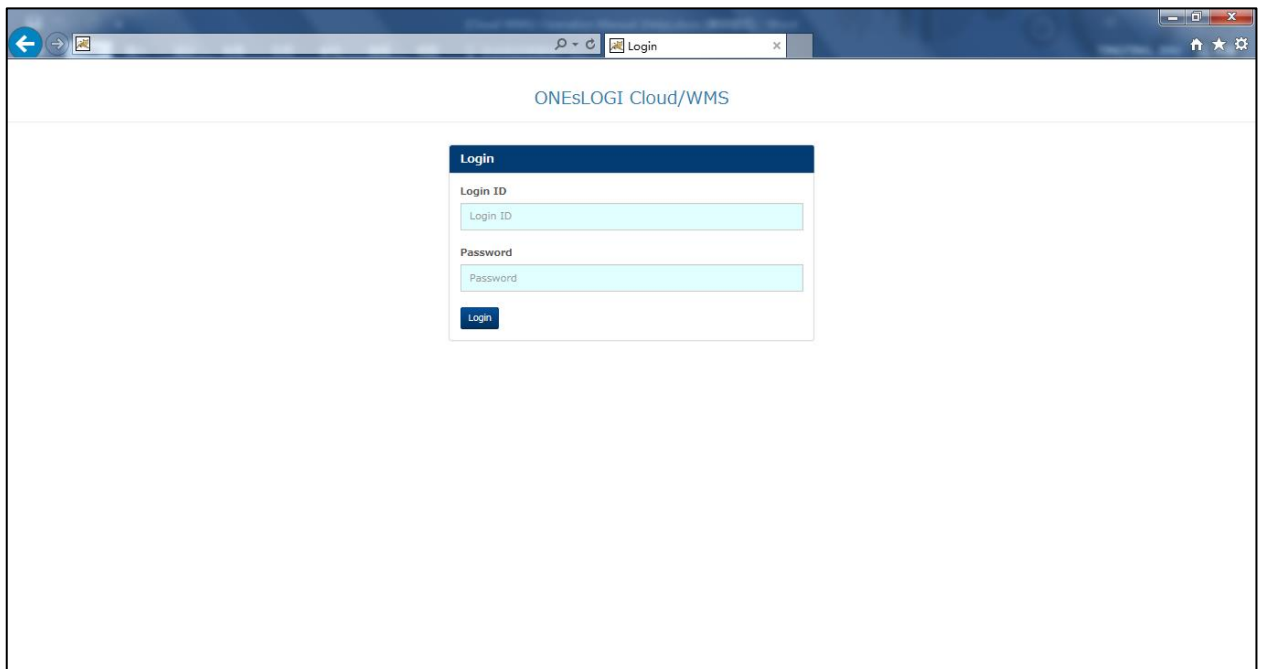

1. Screen Timeout

This section explains what to do when a long period of inactivity has caused a timeout error.

- (1) If no actions have been taken in a set period of time, the following dialogue box will be displayed when resuming operation (on first server access since resuming operation).

- (2) Click [OK] to display the Sign-In screen, then enter your Username and Password.

- (3) Click [Log In] to be redirected to the screen before timeout.

Note

* Because the screen will be redisplayed as it was when it was just opened, any information that was entered after opening the screen will need to be entered again.

2. How to Resume If the Screen Was Closed During Shipping Inspection.

If the screen is closed during shipping inspection, the shipping instruction's status will be stuck in "Under Inspection". This section explains how to resume inspection when this happens.

- (1) During shipping inspection, if the screen is closed or otherwise navigated away from using the [Backspace] key or the browser's Back [←] button without clicking [Suspend Shipping Instruction], the shipping instruction's status will be stuck in "Under Inspection" and inspection cannot be resumed regularly.

The screenshot shows a web browser window with the title "Shipping Inspection". The browser's address bar shows "Shipping Inspection". The page has a blue header with navigation tabs: "Los Angeles logistics center", "MENU", "EC ORDER", "RECEIVING", "SHIPPING", "INVENTORY", "INVENTORY COUNT", "MASTER", "DAILY", "OPERATION", "SYSTEM", "HELP", and "USER08". A red error message is displayed at the top: "Cannot begin Shipping Inspection for Shipping Instructions currently under inspection." Below this, a search form is visible with fields for "Center" (US-CE: Los Angeles logistics center), "Ship To" (US001: American), "User Code" (USER08), and "User Name" (USER08). A blue arrow points to the "Ship To" field. Below the search form, another red error message is displayed: "Cannot begin Shipping Inspection for Shipping Instructions currently under inspection." The bottom section of the form contains various input fields for "Source Code/Item Code", "Item Code", "Item Name", "Total Package Qty", "Inspection Qty", "Inspected Qty", "Instruct Qty", "Total Inspection Qty", "Required Total Inspected Qty", "Show Uninspected Only", and "Required Status". There are buttons for "Input Qty", "Input Box", "Suspend Inspection", and "Clear". The footer of the page shows "ONESLOGI Cloud/WMS" and "© 2014 Hitachi Distribution Software Co., Ltd."

- (2) In order to resume inspection, first navigate to <Shipping Instruction> and then either cancel picking or cancel inspection by clicking on [Cancel Picking] or [Cancel Inspection], respectively.

When cancelling picking:

Click on [Instruct Picking] again to redo the picking process.

Then, enter the newly assigned Pick No. in <Shipping Inspection> to begin shipping inspection.

When cancelling inspection:

Restart the shipping inspection process from <Shipping Inspection>.

3. When Simultaneous Operations Cause an Error

3.1. When Simultaneous Operations by Multiple Users Cause an Error

When multiple users are performing the same operation simultaneously, an error may occur if one user's actions interfere with another's.

Examples:

Example 1:

While one user is viewing search results in <Shipping Instruction>, another user instructs picking on the same data. When the first user selects this data and clicks on [Instruct Picking], an error occurs.

Example 2:

While one user using <Receiving Pre-Entry> to modify a pre-existing receiving plan, another user completes receiving entry on the same plan from the <Receiving Entry> screen. When the first user clicks [Submit] on <Receiving Pre-Entry>, an error occurs.

The following steps can be taken to resume operations in the case of a simultaneous operation error.

- (1) When another user's actions have interfered with your operation, the following error message will be displayed on screen:

The screenshot shows the 'Shipping Confirmation' interface. At the top, a red banner displays the error message: "This record may have been modified by another user. Please review the contents." A blue arrow points to this message. Below the banner, there are search filters for Center, Ship Date (To), and Ship Date (From). A table of shipping records is visible, with columns for Ship Date, Shipping Status, Shipping Status Name, Carrier Service Level Code, Carrier Service Level Name, Carrier Code, Carrier Name, Ship-To Code, and Ship-To Name. The table shows three records, with the second record selected. At the bottom, there are buttons for 'Search', 'Excel Output', 'Confirm w/o Inspection', 'Shipping Instruction', 'Cancel Shipping Confirmation', and 'Confirm Shipment'.

Note

- * There may be certain cases where a simultaneous operation error will happen along with another error, causing a different message to be displayed than the one shown above depending on the timing of the errors.
For example, duplicate code errors in master maintenance screens or inventory shortage errors in inventory adjustments may cause this scenario.

-
- (2) If a simultaneous operation error has occurred, click on [Search] again or refresh the page to display the most recent data.
 - (3) Once the latest data is displayed, check its contents and redo any actions as necessary (It is possible that another user had already completed the same action).

3.2. When a Simultaneous Operation Error Occurs During Receiving Entry

During receiving entry, the same error message may be displayed as when two users' simultaneous actions cause an interference.

This error can occur when the following conditions are met:

- (1) After a receiving plan is registered, the supplier tied to that plan is deleted from the Account Master.
- (2) If a user attempts to complete receiving entry on that receiving plan, an error will occur because the supplier no longer exists.

The following steps can be taken to identify and resolve the error:

- (1) During receiving entry, the simultaneous operation error message is displayed.

The screenshot displays the 'Receiving Entry' screen in a web browser. The browser's address bar shows 'Receiving Entry'. The page has a blue header with navigation tabs: 'Los Angeles logistics center', 'MENU', 'EC ORDER', 'RECEIVING', 'SHIPPING', 'INVENTORY', 'INVENTORY COUNT', 'MASTER', 'DAILY', 'OPERATION', 'SYSTEM', 'HELP', and 'USER08'. A red error message is displayed at the top: 'This record has been modified by another user. Please review the updated contents.' Below this, the form contains fields for 'Center' (US-CE:Los Angeles logistics center), 'Shipper' (US001:HITACHI American), 'Supplier Code' (USC001), 'Receiving Date' (7/1/2015), 'Plan Customer Rcv. No.' (00001), 'Former Rcv. No.' (00001), 'Receiving ID' (00000000000101), and 'Process Class' (01:Receive). A blue arrow points to the 'Shipper' field. A red error message is also displayed in a box: 'This record has been modified by another user. Please review the updated contents.' Below the error message is a table with columns: 'No.', 'Item Code', 'Location Code', 'Source Code', 'Item Name', 'Item Abbrev.', 'Total Plan Qty', 'Put-away Case Qty', and 'Put-away Piece Qty'. The table contains one row with the following data: '1', 'PD01', 'A10010101', '12345111111111', 'ITEM NAME01', 'ITEM NM01', '10,000', '0', and '0'. At the bottom of the screen, there are buttons for 'Split Line', 'Cancel Split', 'Cancel Receiving', and 'Submit'. The footer shows 'ONELOGI Cloud/WMS' and '© 2014 Hitachi Distribution Software Co., Ltd.'.

No.	Item Code	Location Code	Source Code	Item Name	Item Abbrev.	Total Plan Qty	Put-away Case Qty	Put-away Piece Qty
1	PD01	A10010101	12345111111111	ITEM NAME01	ITEM NM01	10,000	0	0

(2) Navigate to <Receiving Inquiry (Order)> and perform an error check.

Confirm that the “Rcv. Status Name” column displays “Error,” and that the “Error Message” column displays “Does not exist in Account Master.”

The screenshot shows the 'Receiving Inquiry (Order)' application. The search filters are set to Center: US-CE:Losangeles logistics center, Shipper: US001:HITACHI American, and Receiving ETA (From): 7/1/2015. The table below shows the search results.

Receiving ETA	Put-away Date	Plan Supplier Code	Plan Supplier Name	Supplier Code	Supplier Name	Plan Customer Rcv. No.	Customer Rcv. No.	Recei
7/1/2015	7/1/2015	USC001	Losangeles Logistics Center	USC001	Losangeles Logistics Center	00000000	00000000	00000000
7/1/2015	7/1/2015	USC001	Losangeles Logistics Center	USC001	Losangeles Logistics Center	00000000	00000000	00000000
7/1/2015	7/1/2015	USC001	Losangeles Logistics Center	USC001	Losangeles Logistics Center	00000000	00000000	00000000
7/1/2015	7/1/2015	USC001	Losangeles Logistics Center	USC001	Losangeles Logistics Center	00000000	00000000	00000000

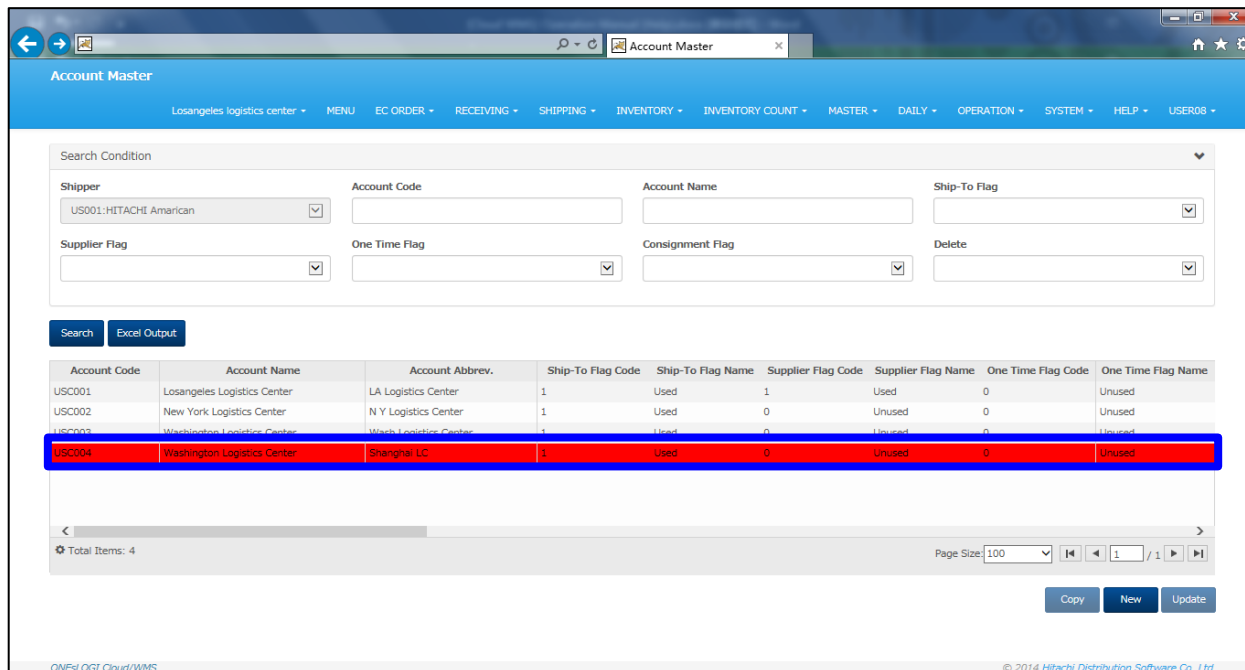

The error message "Does not exist in Account Master." is displayed in a red box, with a blue arrow pointing to the highlighted row in the table.

Note

- * If the Rcv. Status Name column does not display “Error,” or the “Error Message” column displays a different message, refer to **Section 3.1: When Simultaneous Operations by Multiple Users Cause an Error.**
- * For instructions on how to perform an error check, please refer to **Operation Manual (PC), Section 2.5: Identifying and Resolving Errors in Receiving Plan.**

- (3) Search through <Account Master> and confirm that the supplier used in the plan is marked as Deleted.

Note

- * If the contents of "Rcv. Status Name" column changes to "Open" and the "Error Message" column becomes blank, then the error is resolved and receiving entry may be resumed.

4. Unable to Log In or Unable to Operate Screen

If you are unable to log in or become unable to use ONEsLOGI Cloud WMS during operation, it is possible that the system may be down for maintenance or unexpected circumstances. You will not be able to operate any ONEsLOGI Cloud WMS functions while the system is stopped.

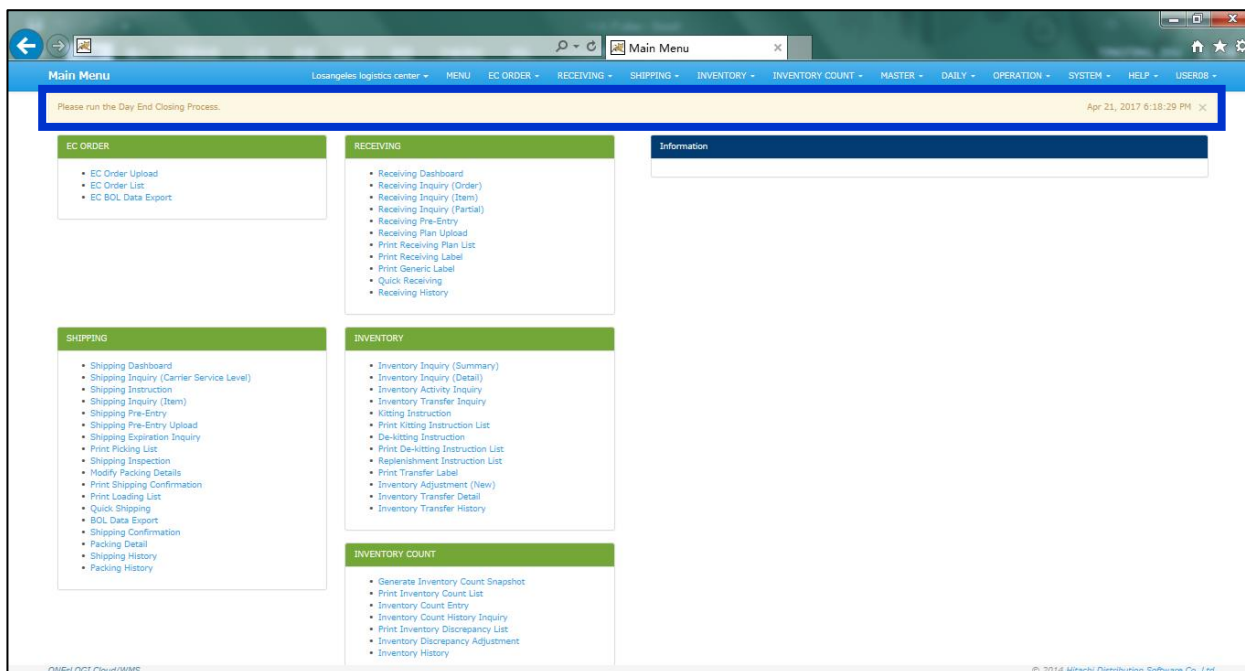

Please try re-establishing the connection about three times.

If the problem persists after retrying multiple times, please contact your System Administrator.

5. When Day End Closing Process Was Not Run on a Previous Day.

At the time of Login, if the System Date is set to a previous day due to the Day End Closing Process not being run, a message will be displayed urging the user to run the Day End Closing Process.

Please access Daily → <Day End Closing Process> from the navigation bar and run the Day End Closing Process.

Note

- * The same message is also displayed when the page is refreshed by pressing the [F5] key.
